SOLUTION

Gardner Leader take advantage of the next generation network owned and operated by Stream by using them as their connectivity provider across their four sites in Berkshire. This includes a Point to Point Ethernet service which acts as a reliable and consistent data link to aid inter-site communications to support the growth and flexibility of the business.

Stream boast as a unique offering both as a carrier integrator and network developer, ensuring that the best option for communications is consistently reached. Whether services are taken as standalone or as in the case of Gardner Leader, as part of a wider network, Stream has the capability to work with businesses of all sizes and respond to demands quickly and professionally.

Neil Prevett, Practice & Technology Director at Gardner Leader commented "working with Stream Networks has been of great benefit to Gardner Leader. Throughout every process Stream were transparent to the fullest, ensuring that any problems we encountered during the fibre installation were handled efficiently and to our satisfaction. We have had and continue to enjoy a strong working relationship with Stream Networks at all levels, our technical queries are always dealt with to a high standard and in a prompt manner; something that is very important to us."

Prevett continued; "we benefit from an increased Internet performance and reliability which allows the business to take advantage of new technologies whilst emphasising a focus on our core business operations and providing the best client service. The investment we have put into our network with Stream now means we are in a position to embrace further Cloud technologies. As Stream also own and manage their own Cloud infrastructure we know our data remains in the UK and under the control of an ISO27001 organisation."

ABOUT STREAM NETWORKS

Stream Networks has been built for business use, enabling our customers to leverage the power of our 10GB network capacity and benefit from our peering agreements by lowering costs and increasing bandwidth.

Our core is built using Cisco and Juniper to provide a fully meshed network between four key UK Data Centres, at which point we extend our footprint with our peering agreements and connections into the major carriers. Our network is managed and monitored 24x7x365 to ensure your business stays connected.

With a significant capital investment in our high availability Cloud infrastructure (which continues to grow each year), businesses are able to realise the benefits of moving computing to the cloud whilst knowing their data is secure, UK-based, and available 24x7x365. Based in our core UK Data Centres, each cluster is designed to provide 100% uptime, and comprises the latest in replicated storage arrays, network capacity, and processing power, all built using VMware's HA HyperVisor.
