*Cyber*Defend

Managed Vulnerability, Simplified

What is CyberDefend?

CyberDefend is a fully managed vulnerability scanning service designed to uncover weaknesses across your digital infrastructure before cybercriminals do.

Our platform continuously scans your IT systems using advanced detection technology and benchmarks findings against a global database of unknown vulnerabilities.

From unpatched software and misconfigurations to newly emerging threats, CyberDefend gives you a clear, prioritised view of what to fix and when, so your team can stay focused and one step ahead.

Why Choose CyberDefend?

Faster Threat Detection

Identify vulnerabilities before attackers can exploit them.

Continuous Visibility

Eliminate blind spots across your environment 24/7/365.

Supports Compliance Goals

Meet data protection, governance, and regulatory requirements.

Remediation Prioritisation

Fix what matters first, with expert guidance.

A Versatile, Future-Proof Solution

Whether you're just getting started with vulnerability management or looking to strengthen your existing security posture, CyberDefend gives you the insights and tools you need.

Your Always-On Security Partner

stream

Proactive Defence

Cyber threats move fast - often within hours of discovery. CyberDefend ensures your systems are scanned continuously for the latest vulnerabilities, with real-time alerts and actionable reporting.

Built to Scale

CyberAssess provides comprehensive analyses of Cyber Risk compliance. It highlights areas of both adherence and underperformance, offering a holistic roadmap for advancing your Cyber Strategy.

Actionable Intelligence

Our team of qualified consultants will assist you in understanding the risks and impacts of cyberattacks on businesses like yours, demonstrating the financial return on any cyber investment or strategy.

About CyberDefend

CyberDefend is powered by Stream. Since 2007, we've used our offensive and defensive expertise to keep our customers protected and secure.

We don't just scan for vulnerabilities; we help you build a long-term, sustainable security posture that keeps threats at bay.

Key Capabilities

Robust System Checks

Comprehensive scanning of critical systems ensures your infrastructure remains resilient and secure.

Prioritised Remediation

Industry-leading scanning tools paired with expert interpretation help you respond efficiently to vulnerabilities.

Rapid Threat Response

Automated alerts notify you the moment new threats are discovered; no need for manual scans.

Cloud Visibility

Monitor your cloud environments, track asset changes, and sync scan targets automatically.

External Perimeter Monitoring

Know what your organisation exposes to the internet and receive alerts or changes that could elevate risk, such as newly opened ports or unexpected services.
