

# CyberDetect

## Real-Time Detection, Zero Compromise

[Learn More](#)[Contact Us](#)

### What is CyberDetect?

CyberDetect is an extended detection and response (XDR) solution delivered by Stream as a fully managed service.

It provides **24/7 threat hunting, detection, and response**, helping organisations stay protected against emerging cyber threats.

Most businesses lack the internal resources - whether tools, expertise, or time - to manage cybersecurity solutions around the clock.

CyberDetect bridges that gap by doing more than simply alerting you to suspicious activity. Our expert team proactively investigates and neutralises even the most complex, sophisticated threats on your behalf.

### What CyberDetect Delivers

With CyberDetect, your organisation gains access to a dedicated 24/7 team of security professionals who:

- Continuously hunt and validate threats
- Assess the scope and severity of threats using comprehensive data
- Apply business context to accurately determine risk
- Take swift and remote actions to **disrupt, contain, and eliminate threats**

### Key Capabilities

#### Round-the-Clock Threat Response

Work with a dedicated 24/7, UK-based team that actively contains and neutralises attacks.

#### Governance, Risk & Compliance Support

Helps fulfil key regulatory, governance, and data protection requirements.

#### Advanced Threat Hunting & Detection

We combine machine learning with expert analysis to uncover hidden and evolving threats.

#### You Stay in Control

We handle the operations, but you define how and when incidents are escalated and what actions are taken.

# Threat Intelligence and Response

## Adversarial Detection

Many attacks mimic legitimate processes. Our proprietary investigation techniques identify subtle signs of compromise, distinguishing genuine behaviour from malicious tactics, techniques, and procedures (TTPs).

## Proactive Security Posture Improvement

Receive actionable recommendations to strengthen your defences by addressing weaknesses in your infrastructure and configurations.

## Machine-Accelerated Human Reponse

Leverages AI and human expertise to investigate alerts thoroughly and execute precise threat response actions.

## Enhanced Telemetry

Integrates with other CyberShield tools for deeper visibility, extending threat analysis beyond endpoints to reveal complete adversary behaviour patterns.

## Outcome-Driven Security

Our team of qualified consultants will assist you in understanding the risks and impacts of cyberattacks on businesses like yours, demonstrating the financial return on any cyber investment or strategy.

## Asset Discovery & Visibility

Gain insights into operating systems, installed applications, vulnerabilities, and managed and unmanaged assets. These are crucial for impact assessments and security planning.

## Proactive Defence

Combines internal threat intelligence with fresh indicators of compromise through hunting, giving your environment continual protection.

## Elite Expertise at Your Side

Our team of ethical hackers, engineers, and threat hunters monitor your systems 24/7, investigating anomalies and neutralising threats in real-time.

## About Stream

Stream is a UK-based provider of secure, cloud-first connectivity and infrastructure solutions.

Operating from Newbury, Berkshire, Stream delivers managed WAN, UCaaS, private cloud, and cybersecurity services to businesses across the UK.

Whether you're looking to bolster your IT infrastructure or enhance your cybersecurity posture, Stream has the in-house expertise and infrastructure to support your growth.
