

# CyberSkill

## Security Awareness Training That Works

### What is CyberSkill?

**CyberSkill** is a fully managed security awareness training platform designed to help organisations reduce human risk and build a strong security culture.

Employees are often the weakest link in cybersecurity, necessitating security awareness training as a vital line of defence against ransomware, phishing, and social engineering attacks.

With **CyberSkill**, you can simulate real-world phishing attacks, deliver interactive training content, and automatically track user performance. The platform arms your workforce with the knowledge and awareness necessary in identifying threats and avoiding costly breaches.

Whether you're building a new security training program or enhancing an existing one, Stream's comprehensive service ensures your team is equipped to tackle today's most pressing cyber threats.

### Train, Track, Transform

**CyberSkill** provides a complete loop for behavioural change.

From identifying vulnerable users to training and validating results, the system enables various cybersecurity initiatives.

### Key Benefits

#### On-Demand Testing

Run full-scale penetration tests whenever needed, as frequently as your business requires.

#### Continuously Evolving Framework

Built on an adaptive methodology that progresses alongside the ever-evolving threat landscape.

#### Expertise in a Box

CyberTest incorporates years of security experience from OSCP, CISSP, CEH, and OSCE-certified professionals.

#### Clear Activity Logs

Every action taken by the platform is logged in real-time for cross-referencing with your internal monitoring systems.

#### Compliance-Ready

Ensure ongoing compliance with key frameworks by conducting internal network assessments as part of routine operations.

# What You Get With CyberSkill

## Training Made Simple

### Bite-Sized Learning

Deliver concise, targeted lessons with pre-set learning paths tailored to knowledge gaps.

### Social Engineering Simulations

Teach users how to identify red flags in phishing emails with interactive, instant feedback.

### Realistic, Localised Content

Access a library of relevant phishing templates and training content specific to your business.

### Simulated Attachments

Deploy tests using mock attachments (PDF, Word, Excel, etc.) to assess user behaviour.

### Risk Scoring

Use the Virtual Risk Officer dashboard to assess risk by user, department, or the entire organisation over time.

## What You Get

### Project Management and Planning

Structured rollout with define phases and responsibilities.

### Status & Progress Reports

Keep stakeholders informed of activity and results as testing progresses.

### Detailed Activity Logs

Timestamped data makes correlating test events with system logs seamless.

### Expert-Driven Support

Backed by a team of security professionals with years of penetration testing experience.

## About Stream

Stream is a UK-based provider of secure, cloud-first connectivity and infrastructure solutions.

Operating from Newbury, Berkshire, Stream delivers managed WAN, UCaaS, private cloud, and cybersecurity services to businesses across the UK.

Whether you're looking to bolster your IT infrastructure or enhance your cybersecurity posture, Stream has the in-house expertise and infrastructure to support your growth.
